### **DETAILED ACTION**

1. Claims 1, 3-10, and 31 are pending in this office action, claims 2, 11-30, 32, and 33 are canceled based on an examiners amendment.

### ***Allowable Subject Matter***

2. Claims 1, 3-10, and 31 are allowed.
3. The following is an examiner's statement of reasons for allowance: the prior art of record fails to teach creating a SSL connection, without using certificates, and then increasing security by using certificate-based authentication without breaking the already established SSL connection.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent Publication Number 2002/0029350, to Cooper et al., teaches at figure 5 and paragraph 0222, that the user logs on (does not specify if an

Art Unit: 2136

SSL connection was made) and subsequently authenticates the digital certificate of the user.

5. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Gary Hamilton (U.S. Reg. No. 31,834) on February 22, 2008.

Art Unit: 2136

1. (Currently amended) A method for performing authentication operations, the method comprising:

performing a non-certificate-based authentication operation through an SSL (Secure Sockets Layer) session between a server and a client; and  
subsequent to performing the non-certificate-based authentication operation, performing a certificate-based authentication operation through the SSL session between the server and the client without exiting or renegotiating the SSL session prior to completion of the certificate-based authentication operation,

**wherein the non-certificate-based authentication operation through the SSL session uses a first digital certificate from the client, wherein the certificate-based authentication operation uses a second digital certificate from the client, and wherein the first digital certificate and the second digital certificate are not identical.**

2. (Canceled).

11-30. (Canceled).

31. (Currently amended) A method for performing authentication operations, the method comprising:

receiving at a server a first resource request from a client;  
in response to determining that the first resource request requires completion of a non-certificate-based authentication operation prior to responding to the first resource

Art Unit: 2136

request, establishing an SSL (Secure Sockets Layer) session between the server and the client;

performing a non-certificate-based authentication operation through the SSL session;

in response to successfully performing the non-certificate-based authentication operation, sending a first resource response from the server to the client;

receiving at the server a second resource request from the client through the SSL session subsequent to performing the non-certificate-based authentication operation;

in response to determining that the second resource request requires a certificate-based authentication procedure, downloading an executable module to the client from the server through the SSL session;

receiving at the server through the SSL session a digital signature that has been generated by the executable module using a digital certificate at the client; and

in response to successfully verifying the digital signature at the server, sending a second resource response from the server to the client,

**wherein establishing the SSL session uses a first digital certificate from the client, wherein the certificate-based authentication operation uses a second digital certificate from the client, and wherein the first digital certificate and the second digital certificate are not identical.**
